What is Grafana?

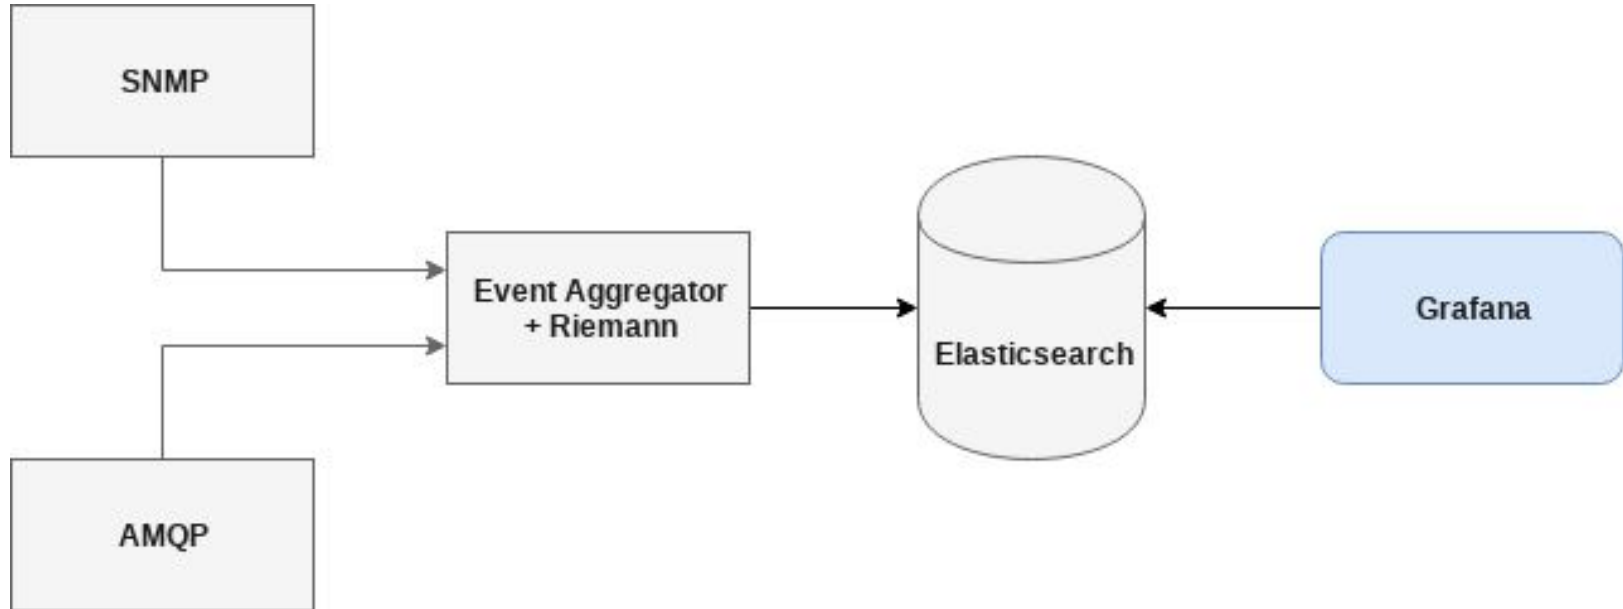

- A feature-rich tool for time series and data visualization
- Open source, extensible with plugins
- Free, with paid cloud-hosted option

Features

- Multiple, extensible and shareable data sources / dashboards
- Alerting / notifications (email, Slack...)
- Multiple interactive visualization options (histograms, geo maps, single stats)
- Multi-platform (Windows, Linux, Mac, Docker)
- Built-in user/role management + OpenID authentication

How are we using it?

Pros/Cons

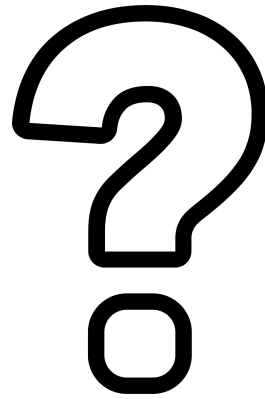

- Open source
- Extensible (plugins)
- Beautiful “out-of-the-box”
- Highly customizable views
- Painless dashboard management

- “Edge-case” views need to be implemented
- Limited “on-the-fly” data manipulation

Questions?
